Overview

This bibliography is part of the Faces of Medicaid analysis, Clarifying Multimorbidity to Improve Targeting and Delivery of Clinical Services for Medicaid Populations, which was undertaken by the Center for Health Care Strategies (CHCS) and The Johns Hopkins University School of Medicine and Bloomberg School of Public Health. The analysis sought to help policymakers identify intervention strategies with the potential to both improve quality and reduce costs for adult Medicaid beneficiaries with multiple chronic conditions.

In tandem with the analysis, the Johns Hopkins research team performed a literature search to identify, existing clinical opportunities for multimorbid patients. The literature search identified intervention opportunities for general multimorbidity as well as for specific multimorbidity patterns that are outlined in the analysis. Following is a bibliography of the identified literature. For the full analysis and related materials, visit the online resource center at www.chcs.org.
