Medicaid in the United States: A Snapshot

As the largest health coverage program in the country, Medicaid serves approximately 67 million individuals—many with a complex and costly array of chronic illnesses and disabilities. No longer linked to welfare in many states, Medicaid provides coverage to individuals well beyond its traditional base, including working parents, childless adults and the recently unemployed. While poor health care quality confronts all Americans, the quality gap is substantially greater for Medicaid beneficiaries, who have lower measures of care for many chronic conditions compared to those with commercial coverage. Managing the care of Medicaid enrollees more effectively could improve health outcomes for millions of Americans and reduce health care expenditures.

With Medicaid enrollment and costs continuing to rise—one million additional enrollees are expected for each 1 percent increase in unemployment—innovations that produce better financial and clinical outcomes are increasingly essential. Such advances will become even more important if a large Medicaid expansion occurs under federal health care reform efforts. Medicaid is uniquely positioned to partner in system-wide initiatives due to its:

- **High prevalence of chronic illness:** Sixty-one percent of adult Medicaid enrollees have a chronic or disabling condition, representing a significant opportunity to test and lead advances in care management.

- **High percentage of racial/ethnic diversity:** People in racial and ethnic minority populations, who make up roughly half of Medicaid beneficiaries under age 65, experience more barriers to care, a greater incidence of chronic disease, lower quality of care and higher mortality than the general population.

- **High proportion of small provider practices:** About half of all Medicaid beneficiaries in select states go to practices with three or fewer providers. These practices have large gaps in chronic care performance—especially for minority populations—creating significant opportunities for improving quality and reducing disparities.

- **Leadership in value-based purchasing:** State Medicaid programs are increasingly using purchasing leverage to measure provider and plan performance; mine data to target improvement efforts; and realign financial incentives and reimbursement. States can maximize these efficiencies by aligning financial incentives with other public and commercial payers to reward better outcomes.

- **Existing systems for managing care:** More than 60 percent of Medicaid beneficiaries are in a managed health care system (e.g., full risk, primary care case management, etc.), linking them directly to a primary care provider. Managed care can be leveraged to provide more integrated care, particularly for those with complex needs.

Medicaid in West Michigan: A Snapshot

Approximately 1.8 million Michigan residents (18%) are enrolled in Medicaid, a number that is likely to rise during the current recession.

- **Medicaid Demographics:** Children account for the greatest proportion (52%) of Michigan’s Medicaid enrollees, followed by non-disabled adults ages 19-64 (24%), the disabled (16%) and the elderly (8%).

- **Medicaid Spending:** In FY 2007, Medicaid expenditures reached over $9.3 billion, including $4 billion in state spending.

- **Medicaid Contracting and Delivery of Care:** As of December 2008, approximately 157,000 Medicaid beneficiaries in the 13 West Michigan counties were enrolled in seven managed care plans: CareSource, Great Lakes Health Plan, Health Plan of MI, McLaren Health Plan, Molina Health Plan of MI, PHP-MM Family Care and Priority Health. Those with the greatest enrollment are Health Plan of MI, Molina and Priority Health. The plans serve children, pregnant women, and aged, blind and disabled beneficiaries.

- **Medicaid and Safety Net Providers:** Michigan has 30 federally qualified health centers (FQHCs), with a total of 157 service delivery sites, serving as safety net providers. Approximately 38 percent of their revenue in 2007 came from Medicaid. Twenty-six FQHCs currently serve West Michigan; 11 of these are in Kent County.

- **Medicaid Reimbursement:** In 2008, the state’s fee-for-service (FFS) primary care provider (PCP) rate was 59 percent of Medicare. PCP rates in Medicaid managed care vary, but often are based on, or greater than, Medicaid FFS rates. The closer the Medicaid rate is to the Medicare rate, the more likely providers are to serve Medicaid patients, creating a greater overlap of payers across provider networks.

- **Pay for Performance (P4P):** In Michigan, all Medicaid health plans must participate in a P4P program. Michigan incentivizes plans in a number of ways, including: (1) giving plans with higher quality scores a greater proportion of auto-assigned enrollees; and (2) withholding a small percentage of capitation rates for redistribution to plans based on clinical and access HEDIS indicators, member satisfaction CAHPS indicators, accreditation status and legislative criteria.

- **Practices Serving Medicaid Beneficiaries:** More than half of Michigan’s Medicaid beneficiaries are served in practices with three physicians or fewer.

- **Collection and Public Reporting of Quality Data:** Medicaid managed care plans must adhere to numerous reporting requirements, including submission of annual HEDIS and CAHPS reports. These reports can be found at [www.michigan.gov/mdch/0,1607,7-132-2943_4860---,00.html](http://www.michigan.gov/mdch/0,1607,7-132-2943_4860---,00.html) under “Medicaid Health Plan Performance Reports.”

- **State Medicaid Leadership:** Michigan Medicaid leadership includes: Acting Medicaid Director Stephen Fitton and Director of Medicaid Operations Susan Moran.

- **Participation in CHCS Systems/Quality Improvement Initiatives:** Michigan Medicaid has participated in the following Center for Health Care Strategies (CHCS) systems/quality improvement initiatives: Transforming Care for Dual Eligibles, Reducing Disparities at the Practice Site, Managed Long-Term Support and Services Purchasing Institute, Long-Term Care Partnership Expansion and Practice Size Exploratory Project For more information, visit [www.chcs.org](http://www.chcs.org).
